

## Guidance notes for parasite treatment prior to importation of dogs to Iceland

It is recommended that this information is supplied to the preparing veterinarian. The veterinarian must ensure to comply with the manufacturer's directions on dosage and treatment intervals for the products in question.

### Treatment for external and internal parasites – part 8 a) and b)

- The veterinary medicinal product(s) used for external parasites must be registered for lice, fleas and ticks.
- The veterinary medicinal product(s) used for internal parasites must be registered for roundworm and tapeworm.
- Anti-parasitic collars are not an acceptable parasite treatment.
- Note that the dog must be treated twice:
  - First treatment between 21 and 28 days (3-4 weeks) prior to importation
  - Second treatment between 5 and 10 days prior to importation
  - Long-acting products for external parasite products given as a first treatment, may be valid as the second treatment as well, if the product is still effective at the time of importation.
- The treatment must be recorded on **Part 8 a) and b)** of the Certificate of Health and Origin (D1/D2).

### **The following list provides information on common anti-parasitic drugs and their efficacy**

*This is not an exhaustive list and your veterinarian might suggest other products.  
If other products are used please list the active ingredients on the D1/D2 certificate.*
